B. Use of Estimates in the Preparation of the Financial Statements:

No significant change.

C. Accounting Policy:

No significant change.

- (6) Loan-backed and structured securities are amortized using the retrospective method, except for securities that have incurred a decline in fair value that is other-than-temporary which are amortized using the prospective method. The effective yield used to determine amortization is calculated based on actual historical and projected future cash flows, which are obtained from a nationally recognized securities data provider.

B. Debt Restructuring:

C. Reverse Mortgages:

D. Loan-Backed Securities:

- (1) The Company applies the retrospective method of revaluing loan-backed securities. The Company's loan-backed securities are revalued quarterly using the constant effective yield method which includes an adjustment for estimated principal prepayments, if any. The effective yield used to determine amortization for these securities is recalculated and adjusted periodically based upon actual historical and/or projected future cash flows. The Company changes from the retrospective to prospective method for valuing the securities when an other-than-temporary impairment has been recorded.

For collateralized mortgage obligations, asset-backed securities and pass-through certificates prepayment assumptions are adjusted periodically.

When unit prices published by the Securities Valuation Office (SVO) are not available, the Company uses a nationally recognized pricing service, as well as broker quotes in determining the fair value of its loan-backed securities.

- (2) Not applicable.

- (3) The Company had no loan-backed or structured securities with other-than-temporary impairments recognized in 2017.

NOTES TO FINANCIAL STATEMENTS

(4) The gross unrealized investment losses and related fair value for impaired securities for which an other-than-temporary impairment has not been recognized as a realized loss were as follows:

a. The aggregate amount of unrealized losses:		
	1. Less than 12 Months	\$ 1,174,567
	2. 12 Months or Longer	\$ -
b. The aggregate related fair value of securities with unrealized losses:		
	1. Less than 12 Months	\$ 34,595,184
	2. 12 Months or Longer	\$ -

(5) The Company determines an other-than-temporary impairment by utilizing discounted cash flow modeling to determine the present value of the security and comparing the present value with the amortized cost of the security. If the amortized cost is greater than the present value of the expected cash flows, the difference is considered a credit loss and recognized in net realized capital gains (losses). The Company estimates the present value of the security by projecting future cash flows of the assets underlying the securitization, allocating the flows to the various tranches based on the structure of the securitization, and determining the present value of the cash flows using the effective yield of the security at the date of acquisition (or the most recent implied rate used to accrete the security if the implied rate has changed as a result of a previous impairment or changes in expected cash flows). The Company incorporates levels of delinquencies, defaults and severities as well as credit attributes of the remaining assets in the securitization, along with other economic data, to arrive at its best estimate of the parameters applied to the assets underlying the securitization.

NOTES TO FINANCIAL STATEMENTS**Note 20 – Fair Value Measurements**

The Company's estimates of fair value for financial assets and financial liabilities are based on the framework established in the fair value accounting guidance. The framework is based on the inputs used in valuation, gives the highest priority to quoted prices in active markets and requires that observable inputs be used in the valuations when available. The disclosure of fair value estimates in the fair value accounting guidance hierarchy is based on whether the significant inputs into the valuation are observable. In determining the level of the hierarchy in which the estimate is disclosed, the highest priority is given to unadjusted quoted prices in active markets and the lowest priority to unobservable inputs that reflect the Company's significant market assumptions. The level in the fair value hierarchy within which the fair value measurement is reported is based on the lowest level input that is significant to the measurement in its entirety. The three levels of the hierarchy are as follows:

- Level 1 - Unadjusted quoted market prices for identical assets or liabilities in active markets that the Company has the ability to access.
- Level 2 - Quoted prices for similar assets or liabilities in active markets; quoted prices for identical or similar assets or liabilities in inactive markets; or valuations based on models where the significant inputs are observable (e.g., interest rates, yield curves, prepayment speeds, default rates, loss severities, etc.) or can be corroborated by observable market data.
- Level 3 - Valuations based on models where significant inputs are not observable. The unobservable inputs reflect the Company's own assumptions about the inputs that market participants would use.

A. (1) Securities measured and reported at fair value as of June 30, 2017:

Description	Level 1	Level 2	Level 3	Total
Bonds				
Industrial and miscellaneous	\$ -	\$ 4,499,272	\$ 36,056,656	\$ 40,555,928
Total securities at fair value	\$ -	\$ 4,499,272	\$ 36,056,656	\$ 40,555,928

At June 30, 2017, the Company also holds Level 3 nonredeemable preferred stock measured and reported at its fair value of \$0.

There were no significant transfers between Level 1 and Level 2 during the quarter.

(2) Securities measured and reported at fair value using significant unobservable inputs (Level 3):

Description	Beginning Balance at 4/1/2017	Transfers into Level 3	Transfers out of Level 3	Total gains & (losses) included in Net Income	Total gains & (losses) included in Surplus	Purchases	Issuances	Sales	Settlements	Ending Balance at 6/30/2017

During the quarter, market fluctuations caused Level 3 securities to change from being held at cost to being held at fair value, resulting in transfers in as shown above.

During the quarter, market fluctuations caused Level 3 securities to change from being held at fair value to being held at cost, resulting in transfers out as shown above.

- (3) Market fluctuations cause securities to change from being held at cost to fair value or vice versa. In addition, securities transfer between levels based on the availability of observable market data. The Company recognizes these transfers at the end of the period.
- (4) The fair values of the bonds and preferred stock in part 1 above are determined by the Company in accordance with NAIC guidelines. These securities are generally priced by the SVO or by a third party organization.
- (5) Not applicable.

Note 25 – Changes in Incurred Losses and Loss Adjustment Expenses

During the period from December 31, 2016 to June 30, 2017, the prior year-end total loss and loss adjustment expense reserves developed favorably by \$12,446,000, resulting from better than expected loss and defense and cost containment development primarily in the workers' compensation, commercial multiple peril, other liability – occurrence and products liability – occurrence lines (excluding environmental reserves). This favorable development was partially offset by unfavorable development for environmental reserves, primarily in the other liability – occurrence line.

The improvement was driven by better than expected loss experience in (i) the workers' compensation line for multiple accident years, (ii) the commercial multiple peril line for liability coverages for multiple accident years, (iii) the other liability – occurrence line for both primary and excess coverages for multiple accident years and (iv) the products liability – occurrence line across multiple accident years. Environmental reserves developed unfavorably, primarily in the other liability – occurrence line for "Prior" accident years.

Excluding environmental reserves and other runoff exposures, favorable development in adjusting and other expense reserves was primarily driven by the allocation of adjusting and other expense reserves by year. This favorable development was fully offset by unfavorable development for environmental and other runoff exposures, primarily in "Prior" accident years.

The remaining changes are generally the result of ongoing analyses of recent loss data and trends. A portion of the change from prior year effects relates to retrospectively rated policies which are subject to premium adjustments.
